understand how to manipulate images. They cover some of the topics covered in this book.

Photoshop's user interface consists of various toolbars. These toolbars can be moved to any position along the work space, and any object they contain can be dragged and dropped to another area of the work space. The Interface toolbar provides access to the most basic tools, and is located at the top of the work space

window. The Standard toolbar provides access to most of the other tools and is located in the middle of the work space window. The Selection and Tools toolbars appear when you select the Marquee tool or press the space bar. The Tools palette is located on the right side of the work space window. It provides access to the various tools that can be used to manipulate images. The Preset Manager toolbar is located at the bottom of the

There are a lot of good words to describe the Toronto Raptors: ferocious, gritty, strong, and resilient, to name just a few. But what Toronto fans usually don't realize is that, when it comes to the Raptors' style, there are three words that often don't exist: glamorous, flashy, and elegant. So, while those other better words we listed above, for the Raptors fans out there who still claim that "the

---

Raptors aren't fashionable," here are three words you should use to describe their style: Team Toughness.

There's no doubt that Toronto is still one of the NBA's punchier teams, but they've still evolved over the years into a team that doesn't rely on the singular physical advantages of one player, and instead has embraced the collective talent of their entire roster. All while finding success in their own individual, albeit historically

---

less successful, ways. Tyler Ennis / Troy Taormina-USA TODAY Sports While DeMar DeRozan is a bona fide superstar, and Kyle Lowry and Jonas Valanciunas are two of the league's best centres, the Raptors as a whole have never fully relied on them. They've always had other avenues to success. Arguably the most underrated reason why the Raptors are still relevant is because they still maintain that gritty, gritty identity. Sure, Valanciunas

---

may be one of the league's most positive defensive bigs, and Lowry, while shooting percentages might be tanking, is still a solid basketball player, but it's not that guys like OG Anunoby or Jakob Poeltl have hit a magic age where they're suddenly becoming unstoppable offensive threats, or even that C.J. Miles has become the second coming of DeMar DeRozan. It's actually the simple fact that the Raptors have always had a set of

---

complementary players for each position, and that they continue to find success by employing those complementary players to the best of their ability. For the Raptors, just because you say "the Raptors aren't fashionable," doesn't mean that they have to listen. Don't miss out on the Raptors' season-long process of being the most fearsome, gritty, determined, resilient, smart, and just generally awesome team in the league. Salvage

**What's New in the Adobe Photoshop CS3?**

The present invention relates to a dielectric resonator for use in microwave band and a microwave filter having such a dielectric resonator as a component. A dielectric resonator has a box-like configuration having a cavity

---

resonating electromagnetic waves, and includes an outer conductive sleeve formed, typically, by making a thin conductive film of, for example, aluminum, by etching, or by spraying, and an inner conductive rod, electrically connected to the outer sleeve by, for example, welding. Among the dielectric resonators, there are known dielectric resonators for use in microwave band such as, for example, a dielectric resonator having a

---

configuration in which a conductor is inserted into a dielectric material and a dielectric resonator in which a dielectric material is laminated and bonded to a metal plate. In any dielectric resonator, the inner conductive rod has a function of providing an electric connection between the dielectric resonator and an external circuit in which the dielectric resonator is incorporated. The inner conductive rod of a

---

conventional dielectric resonator for use in microwave band is typically made of copper. Copper is the most conductive material and is, therefore, useful for providing an electric connection between the resonator and an external circuit. However, due to its high degree of conductivity, copper causes a power loss and, therefore, is not suitable for dielectric resonators requiring low-loss power transmission. In addition,

---

copper is susceptible to oxidation and therefore cannot be used in a high-temperature environment. In recent years, dielectric resonators have come into widespread use in microwave bands and, therefore, there is a demand for improved dielectric resonators. More specifically, the efficiency of such dielectric resonators, or the efficiency with which the dielectric resonator functions as a resonator, has come to be required to be increased.

---

For this purpose, studies have been conducted to manufacture the dielectric resonators of a higher-temperature material, a material having low conductivity, or an insulator. However, with the above-mentioned conventional dielectric resonators, a problem has been pointed out in that the electric connection to the resonator can be not made without difficulty because a conductor cannot be firmly welded or fastened

---

to a ceramic dielectric material. "We are dedicated to stopping the drug crisis."
